### **Collaboration Report for First Project**

Brynlee worked on the base for the Index.html file and started the CSS for that page. Then Brynlee primarily spent time working on the individual information pages for each of the tulips. She also made a CSS file to connect with every tulip page. Much of this work included adding media to the files, creating website navigation links, coming up with and researching for information, and stylizing.

Kalei worked on formatting and linking the main index.html page to each tulip subpage. She did the flexbox formatting, an image link directory, and any link features (hover, visited, etc) that appeared on the page. Kalei also found external links to add to a “Learn more” aside directory to help with providing general knowledge about tulips.
